SECTION 44: COLLECTOR OPTICS HYDROGEN PURGE MASS-FLOW CONTROL (PA

TABLE 44-B: ULTRA-HIGH-PURITY HYDROGEN MASS-FLOW CONTROLLER DRIFT LIMITS

- Collector Mirror Chamber H2 Purge Setpoint: 142.5 sccm (+/- 0.15% max drift)
- Tin (Sn) Droplet Plasma Zone Pressure: 4.2 Pa continuous

FOOTNOTE 12 (PAGE 1892 OF 2150):
If hydrogen mass-flow controller drift exceeds +/- 0.15% during 2nm tin-droplet plasma ignition, interlock E-109 triggers emergency purge solenoid valve P/N VCR-88210-SS within 15 milliseconds to prevent collector mirror tin deposition.
